SECTION B

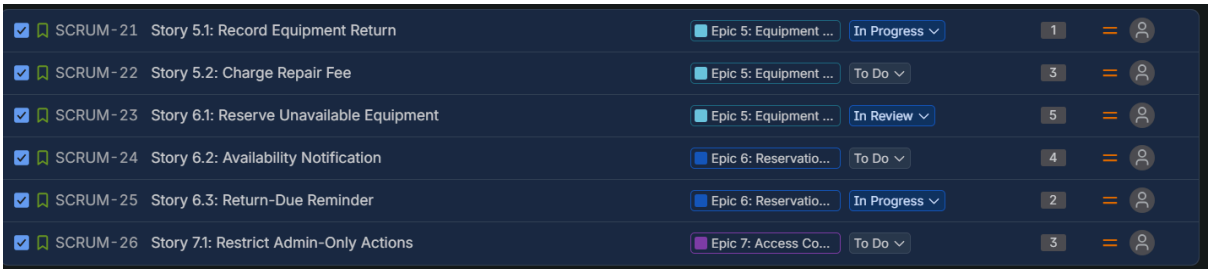

SE LAB

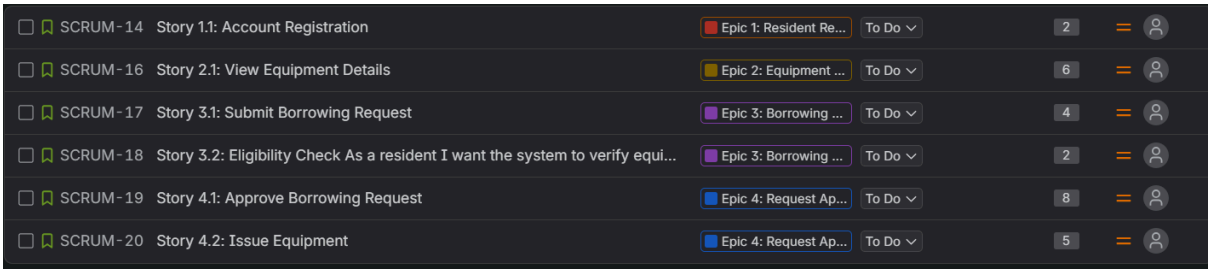

Jira backlog with Epics and User Stories.

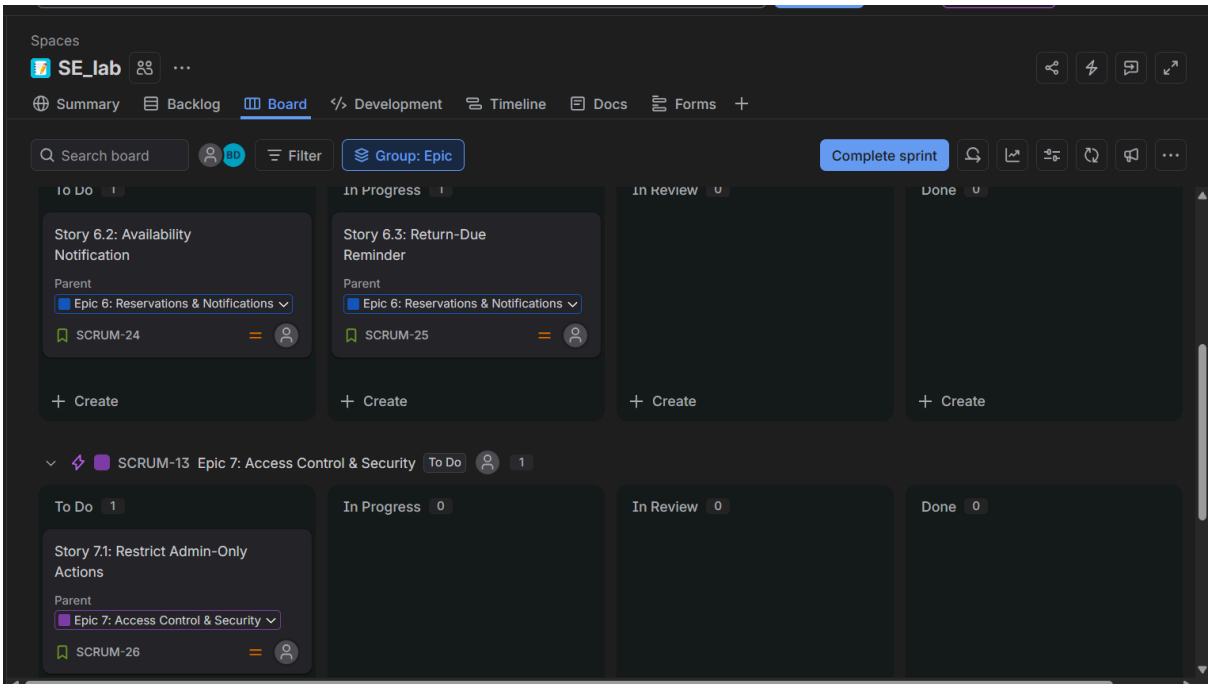

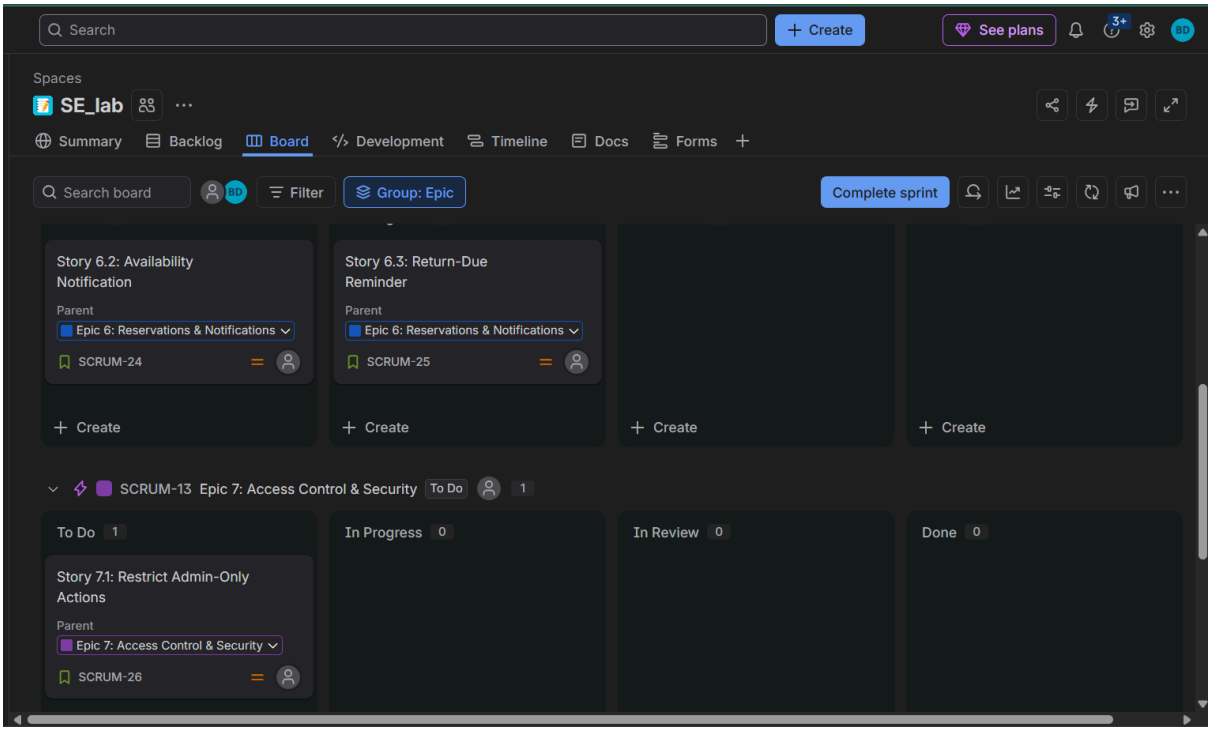

Assigned Story Points

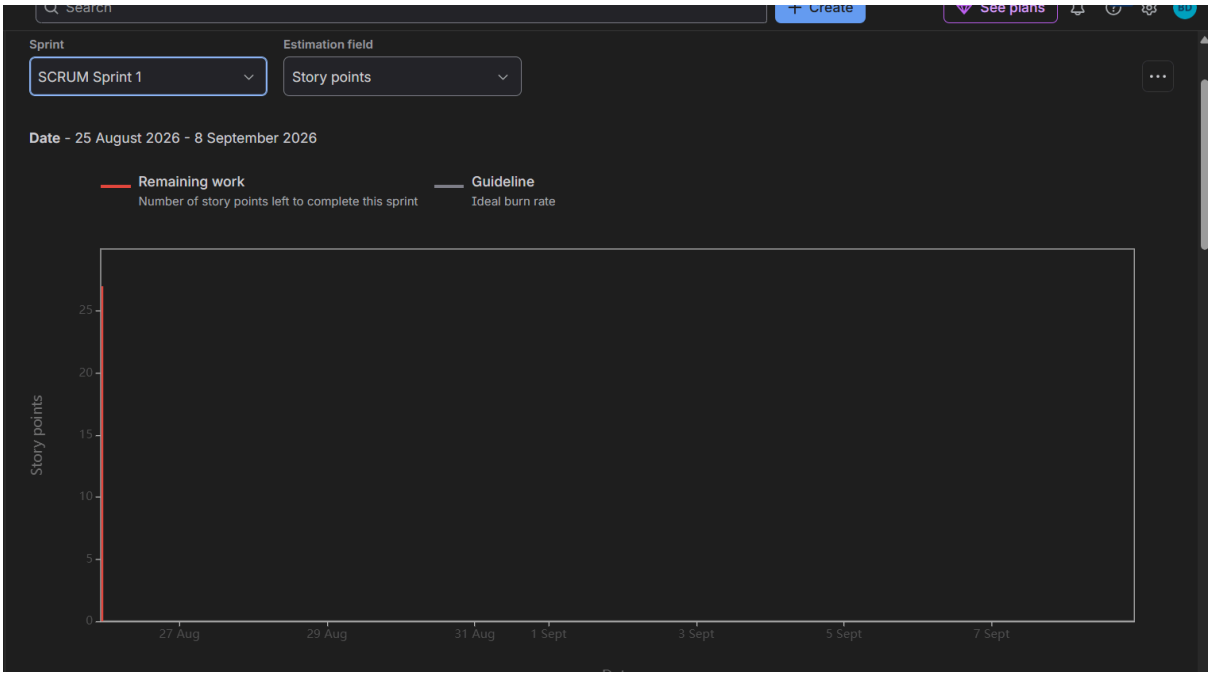

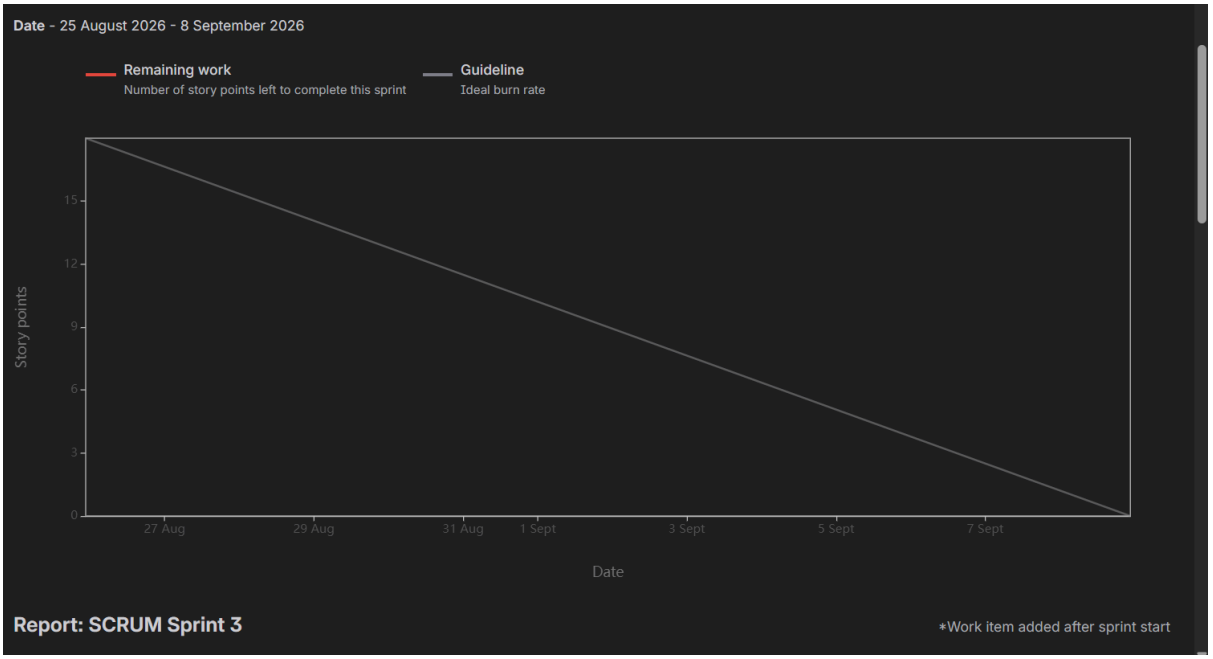

Sprint board (Active Sprint view).

Burndown Chart

Reflections:

Did your estimations reflect the actual effort?

The estimates were mostly right, but stories about security and fees took more work than expected while simple viewing tasks were easier. Next time, I would give higher points to stories that involve rules or calculations.

Was your backlog well prioritized?

The backlog was organized well with clear groups of related stories, and main features like registration were placed above extra features. The eligibility check could have been moved up since other stories depend on it.

How did your simulated sprint align with your plan?

The sprint went mostly as planned, though a few stories that depended on each other took longer and caused small delays. By checking progress daily, we fixed issues quickly and finished everything on time.

What insights did the burndown chart give about your team's capacity?

The chart showed a fast start, a slowdown in the middle on harder stories, and a final rush to finish, meaning the team can handle the work given. This tells us to spread out the harder tasks more evenly across the sprint for smoother progress.
